# Ahaan Mehta

Providence, RI 02912 | (972) 209-3809 | ahaan_mehta@brown.edu | linkedin.com/in/ahaan-mehta | ahaan025.github.io

## EDUCATION

**Brown University**, B.Sc. Applied Math–Computer Science & Economics, **4.00/4.00 GPA** *Providence, RI | Class of 2028*

Relevant courses: Data Structures & Algorithms, Object-Oriented Programming in Java, Computer Systems, Statistics & Probability, Linear Algebra, Differential Equations.

## EXPERIENCE

**Dex (YC S19)**, Software Engineer Intern *San Francisco, CA | May 2026 – Aug 2026*

- Built and shipped two 0⟶1 features for Dex Web v5 in React and TypeScript: a force-directed Network Map and full-stack Priority Map; reached 14.1% and 13.1% of web-app users within 5.5 weeks.
- Engineered HTML Canvas visualisations for 5,000+ nodes using spatial indexing, avatar caching, decluttering, and reduced rebuild churn; designed the Priority Map's Prisma/PostgreSQL migration, Node REST endpoints, and Zod schemas.
- Merged ~90 PRs and 213 commits across web, mobile, and API packages; self-filed and fixed 15+ production issues, hardened pagination and cache invalidation, and resolved a cross-account PII leak within 12 hours.
- Implemented personalised onboarding in React Native and Expo, fixing an asynchronous subscription-query race and helping increase completion from ~70% to 85.7%.

**Collegiate Consulting Group**, Consultant (Client: Adobe) *Providence, RI | Jan 2026 – Present*

- Analysed content, search, and audience datasets for Adobe Live's 3M+ subscribers to identify growth patterns and performance gaps across student segments.
- Translated ambiguous findings into data-backed recommendations and a phased implementation roadmap presented directly to Adobe stakeholders.

**Friday (YC F24)**, Data Analyst Intern *San Francisco, CA | Dec 2025 – Feb 2026*

- Wrote SQL queries and R scripts to analyse onboarding funnels, retention cohorts, and experiment results for an AI-native email client; identified drop-off patterns and delivered recommendations adopted by the founders.
- Designed and evaluated 10+ onboarding and landing-page experiments, defining measurable success criteria and translating findings into prioritised product changes.

## PROJECTS

**APR Poker — Live Game-Management & Analytics App** | *React/TypeScript, Supabase, SQL*

- Built and deployed an installable game-management application using React, TypeScript, Supabase, and SQL, converting game rules and edge cases into persistent production workflows.
- Implemented automated buy-in/cash-out settlement, chip-discrepancy reconciliation, and derived leaderboards; reduced bookkeeping to fewer than 10 taps and scaled usage to 6 groups and 40+ players.

**AI Due Diligence Agent** | *Python, OpenAI API, CrewAI*

- Built a Python and CrewAI due-diligence pipeline with autonomous agents researching company news, financials, and filings through the OpenAI API; generated structured outputs evaluated against analyst-written memos.

## SKILLS & INTERESTS

**Languages:** Java, Python, TypeScript, JavaScript, SQL, R

**Frameworks & Libraries:** React, React Native, Expo, Node.js, TanStack, pandas, NumPy, CrewAI

**Data & Developer Tools:** PostgreSQL, Prisma, Supabase, Zod, REST APIs, HTML Canvas, Git, GitHub, Linear, PostHog

**AI:** OpenAI API, LLM agents, prompt engineering, AI-assisted code review

**Interests:** Soccer, Golf, Poker, Card Magic, Film, Adventure Sports
